

BLACKWOODS INVENTORY SOLUTIONS CAROUSEL

VENDING FOR **SMALL ITEMS**

The Carousel 24/7 dispensing solution is designed to address the needs of workplaces with limited space, isolated work areas, and a requirement for fast access to personal protective equipment (PPE) and industrial products.

FUNCTIONS, FEATURES & BENEFITS

- **24/7 Availability:** The Carousel vending machines can be conveniently placed throughout the workplace, providing round-the-clock access to PPE. Whether it's day or night, employees can retrieve necessary items without waiting in queues.
- **User Identification:** Employees can identify themselves using a keyring fob or RFID card. Once authenticated, they can select the required items from the touchscreen interface.
- **Secure Retrieval:** The designated carousel door opens, allowing users to retrieve their chosen product. The system records the transaction for accurate reconciliation and reporting.
- **Automatic Reordering:** As inventory levels decrease, the system automatically triggers reordering through Blackwoods' seamless EDI (Electronic Data Interchange) and supply chain network. This ensures that essential items are always available.
- **Product Variety:** The Carousel accommodates various product sizes, making it suitable for dispensing gloves, cutting tools, abrasive discs, tapes, safety glasses, and respirators. It efficiently manages large volumes of commonly used items.
- **Expandable:** If needed, the Carousel system can expand to include auxiliary locker cabinets for general-use inventory and high-value assets.

The Carousel 24/7 dispensing solution offers a convenient, secure, and efficient way to manage PPE and industrial products, ensuring workplace safety and productivity.

CAROUSEL
