

BLACKWOODS INVENTORY SOLUTIONS COIL VENDING MACHINE TOOLBOX

VENDING FOR **SMALL ITEMS**

Great for dispensing commonly used consumable products, the Toolbox coil vending machine has an onboard PC & touchscreen interface, is reliable, simple to use, and is capable of producing a wide range of customised usage reports.

Key Features

- Automate replenishment and purchasing processes through EDI ordering
- Track consumables usage with stock on hand and employee usage reports
- Fast access to consumables 24/7
- Onboard PC with touchscreen interface and handheld RFID scanner
- High level user controls and restrictions
- Up to 60 different products / SKUs dispensed in under 4 seconds
- Optional auxiliary Locker cabinets available for increased capacity or to control returnable tooling products

To access, the user simply identifies themselves using a keyring fob or RFID card and selects the product displayed on the user-friendly touchscreen. The relevant coil is then activated, dispensing the item to the drop tray.

The system automatically records what's been removed and consolidates this data for cost reconciliation and other reporting purposes. As inventory volumes run low, the system automatically triggers product reordering and replenishment, via Blackwoods' seamless EDI and supply chain network.

The machine is configurable to manage a wide range of items such as batteries, gloves, cutting tools, abrasive discs, welding products, tapes, safety glasses and disposable respirators.

The system is also expandable to include auxiliary Locker cabinets, for general use inventory and high value assets such as returnable hand tools and power tools.
