

BLACKWOODS INVENTORY SOLUTIONS LOCKER

VENDING FOR HIGH VALUE ITEMS

Offering a high level of security, the Locker is a great way to manage valuable assets such as returnable hand tools and power tools.

To access, the user simply identifies themselves using a keyring fob or RFID card, selects the item displayed on the user-friendly touchscreen, opens the newly unlocked storage door and removes the tool. On returning, the user again identifies themselves, selects the specific item listed on the touchscreen and places the tool back.

The Locker also offers power tool recharging via a rear mounted power strip, and the ability to 'flag' items onscreen that require servicing or repair.

Available in the standard 24-door system, capacity can be increased with optional auxiliary cabinets. For larger items, doors can be linked together, and shelves removed for increased compartments sizes.

Locker can also be used to manage access to consumables such as PPE, MRO, and other indirect materials.

LOCKER
