

# BLACKWOODS INVENTORY SOLUTIONS WEIGHT SCALE VENDING

## VENDING FOR HIGH VOLUME DISPENSING

Designed for high turnover consumable products, Weight Scale vending machines are the perfect solution for a variety of industrial worksites, that require access to essential inventory 24/7.

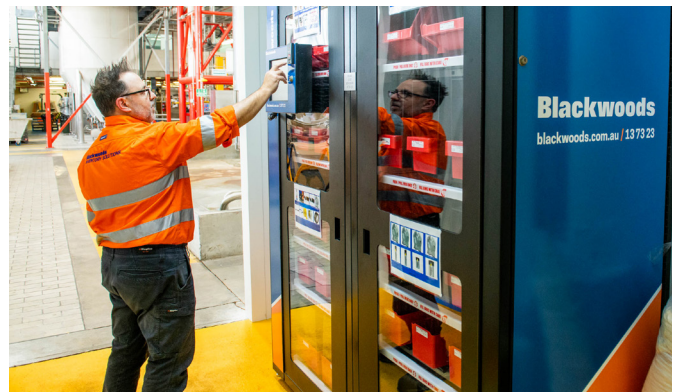

To access, users simply identify themselves via a keyring fob or RFID card, which in turn unlocks the cabinet, allowing access to the items they require.

With its accurate weight scaling functionality, the system automatically records what's been removed and consolidates this data for cost reconciliation and other reporting purposes.

As inventory volumes run low, the system automatically triggers product reordering and replenishment, via Blackwoods' seamless EDI and supply chain network.

Weight Scale vending machines are configurable to manage a wide range of items, such as tools, PPE, MRO, and other indirect materials.
